## Examiner's Amendment

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

Claims 1-17, 30-42, and 44 are canceled as being drawn to non-elected species.

## Reasons For Allowance

The present invention is directed to a variable inlet guide vane actuation system useful on turbine engines and comprising two control channels and two electric motors connected to a vane actuator assembly. Variable guide vane systems and multi-channel control systems are well known in the turbine engine field as shown, for example, by the Wilde and Modeen et al Patents cited on Form PTO-892, and also by the Bools et al Patent cited on Form PTO-1449. Wilde's system uses two hydraulic motors connected to two different vane actuators, Modeen's system uses two channels to control one hydraulic motor and vane actuator, and Bools' system uses three channels interfaced through a duplex converter and two torque motors to operate a one hydraulic motor and fuel valve actuator. Neither these patents nor any of the other references of record

show or fairly suggest the claimed guide vane actuation arrangement, which requires a primary electric motor connected to a primary channel, a secondary electric motor connected to a secondary channel, and a vane actuator assembly connected to both electric motors. The present claims are therefore considered patentable over the prior art.
